

Your #1 Torque Equipment Maintenance Resource

Encore has a new process for your DC Controller repairs. We have moved to a standard (flat rate) repair cost to save time and money. The scope of work, parts replaced and probable cause of failure is still recorded with every repair. Significant cost savings are also still enabled compared with the cost of buying new. Your controllers are fully serviced (every component evaluated) with functional system testing to finish the repair which includes:

- Software upgrades
- Amplifiers
- Motor Drives
- Displays
- Connectors
- Additional Upgraded features
- Motherboards
- Communication Boards

Atlas Copco QST, QMX and the Cleco-Apex Intelligent Tool Repairs

We are successfully supporting these tools for repair on a regular basis. Customers have been experiencing problems with these tools and we can help-support you. These tools are expensive and we can enable significant savings due to our component level repair capabilities.

Atlas Copco QST

Atlas Copco QMX Series

Cleco Intelligent Spindle

Encore can adjust your current DC torque tools to perform higher torque ranges helping you avoid costly new tool purchases. Remember too, we can support your old tools, you do NOT have to upgrade.

Please consider Encore a reliable resource for your Torque Equipment Maintenance Repairs and Calibrations. Start saving time and money today with Encore!
